

Fuze Desktop 5.1

These release notes provide information about Fuze Desktop for Windows® and Fuze Desktop for Mac.

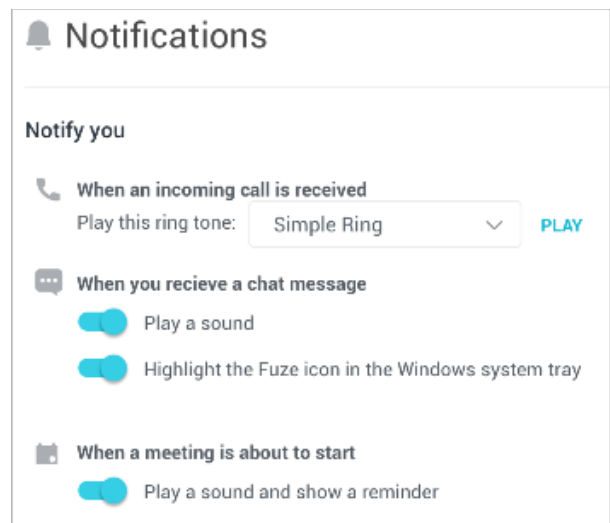

Note: Always remember to visit our [Fuze Community site](#) for the latest release notes and other information.

What's New?

Notification Enhancements

This release introduces several new features for configuring ringtones and Fuze Desktop notification behaviors when you receive calls, messages, and when meetings are about to start.

You can access all of the following features in the Notifications section of the Settings screen (*Profile Menu > Settings > Notifications*).

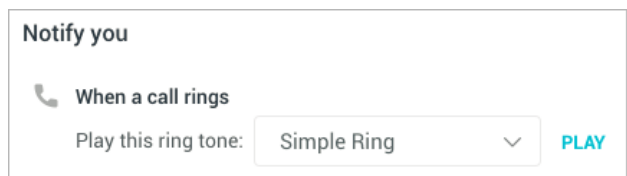

Ringtones

Ringtones are now configurable in Fuze Desktop. You can select from a list of several ringtones to play when you receive calls in Fuze. Simply open your Profile menu and select Settings, then navigate to the Notifications section.

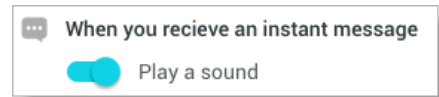

To sample a ringtone, open the ringtone drop-down menu, click on a ringtone, and press *Play* to hear a sample.

To enable a ringtone, simply select it and close or navigate away from the ringtone drop-down menu.

Chat Message Notifications

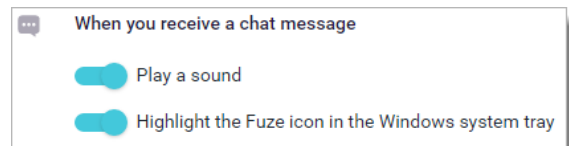

You can now independently control whether or not a notification sound plays when you receive chat messages in Fuze.

Fuze Icon Notifications

We've also introduced the following improvements to the Fuze Desktop taskbar icon:

- The Fuze icon will not flash or bounce when you have unread messages while in *Do not disturb* mode.
- We've streamlined the amount of time and the way the icon flashes (Win) or bounces (Mac) when you have an unread message or missed calls.
- You can now configure whether or not the icon flashes or bounces via the Notifications section of the Settings screen (Profile menu > Settings > Notifications).

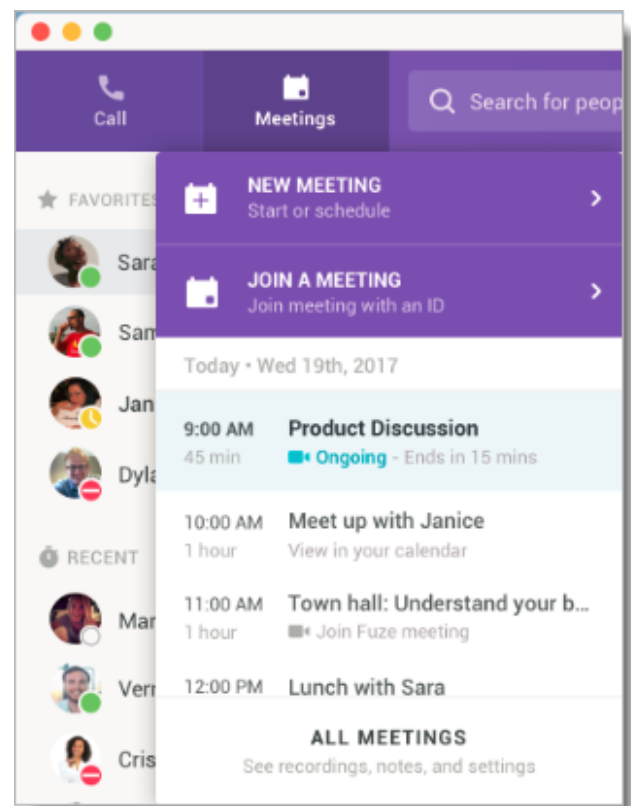

Full Schedule in Meetings Menu

If you have configured Fuze Desktop to connect to one or more external accounts (Profile menu > Settings > Connected Accounts), you can now view meetings for all connected accounts in the Meetings menu.

For example, you configure Fuze Desktop so that Google Calendar is a connected account. You can view all of your upcoming Fuze Meetings, as well as all meetings on your Google Calendar when you open the Meetings menu.

Meetings in your list that have an associated Fuze Meeting are displayed with a  icon.

Clicking on a non-Fuze meeting in your list automatically opens and brings you to the meeting in the calendar app in which the meeting was created.

Fuze Rooms Enhancements

Fuze Rooms extends the power of cloud communication to conference rooms and meeting spaces of all sizes.

We've updated the [Fuze Rooms](#) interface in this release, and we've added calendar and touch-screen integrations, as well as other enhancements to improve your in-room experience.

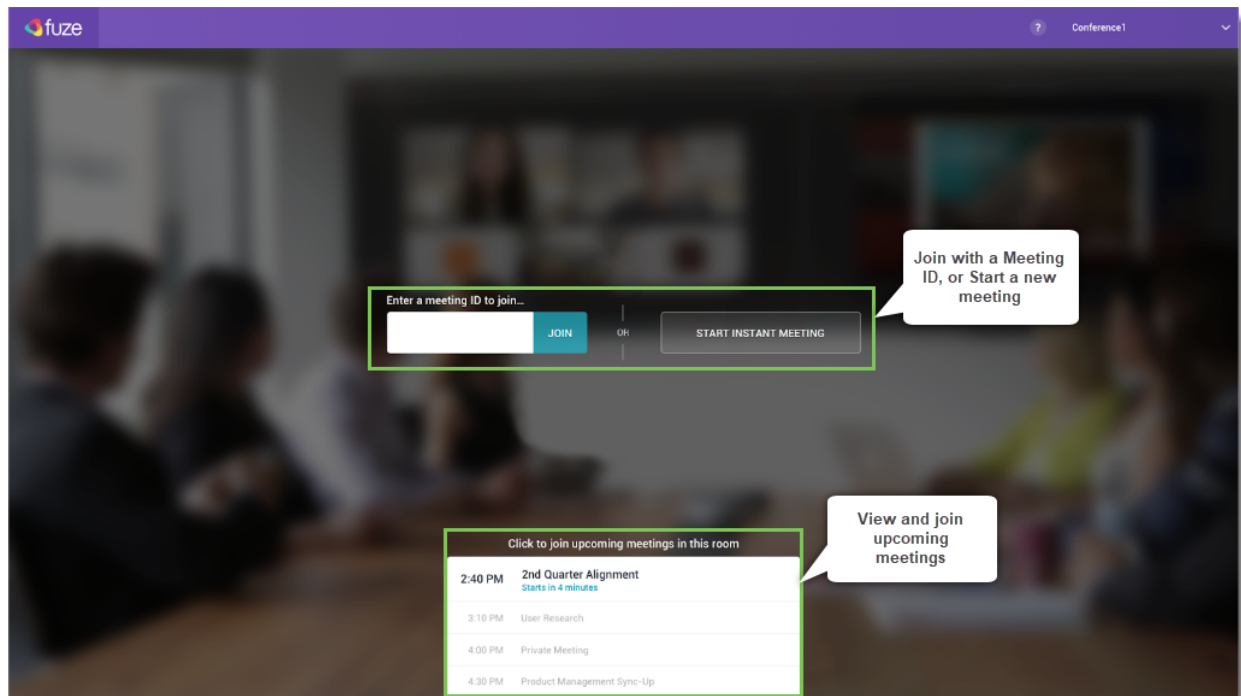

See the following sections for more details:

- [Updated and enhanced interface](#)
- [Introduction of touch screen controls](#)
- [One-click join and connected accounts](#)
- [Automatic updates](#)

Updated Rooms Interface

The Fuze Rooms interface, shown below, has an updated look and feel in this release.

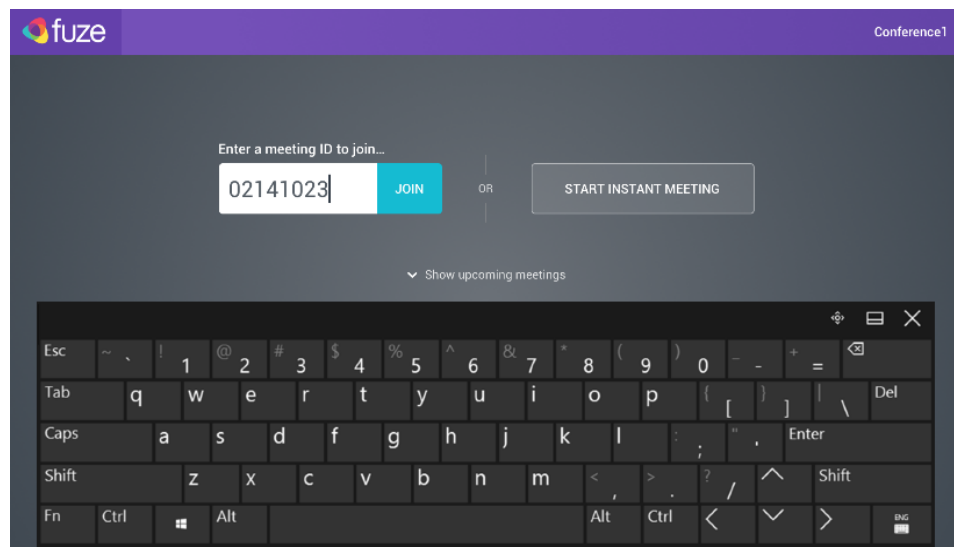

We've relocated the *Join by Meeting ID* field and the *Start Instant Meeting* button to a side-by-side position, and we've updated the Meetings list to display upcoming meetings so that you can join with a single click.

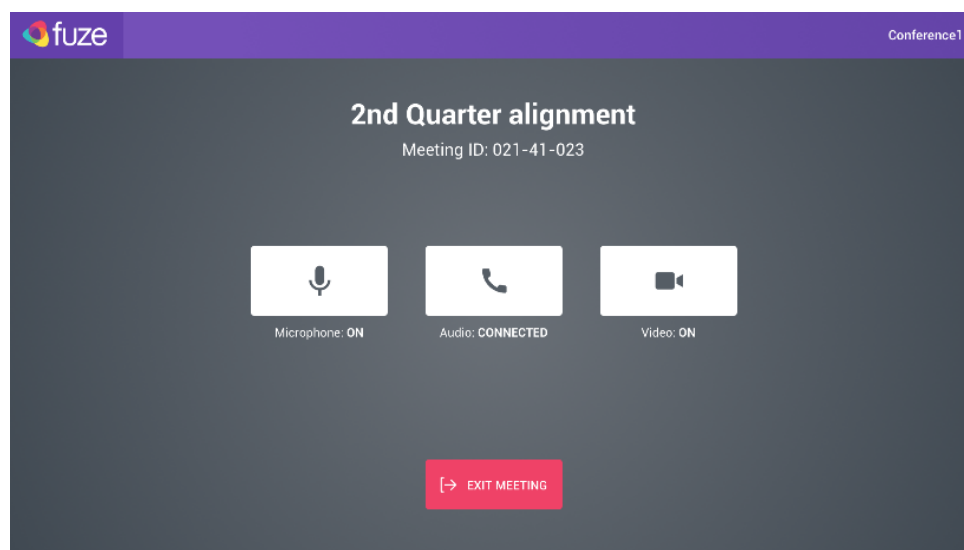

Touch Screen Controls (Windows Only)

You can now configure Fuze Rooms to work with conference rooms that are equipped with MiMO touch screen remote control devices.

When this feature is enabled, you can start or join meetings in Fuze Rooms, access rooms settings, and view and join upcoming meetings using your MiMO device.

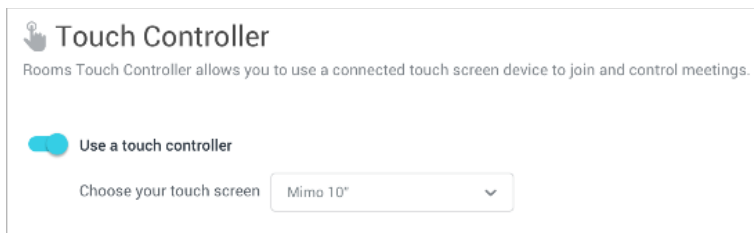

Additionally, when you're in meetings, you can toggle the microphone, audio, and video, and you can exit the meeting from your touch screen device.

Note: This feature is available for MiMO devices that are directly connected to your conference room's dedicated computer.

Enabling the Touch Controller setting in Fuze Desktop

To enable your MiMO touch screen controller in a Fuze Room, use a keyboard or mouse and open the Profile menu, then navigate to *Settings > Touch Controller*.

Enable *Use a touch controller*, and then select the touch screen remote control device you want to use from the drop-down menu.

Connected Accounts

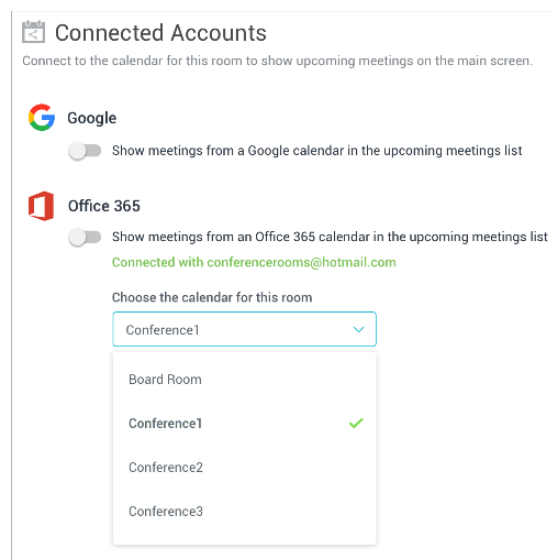

You can now configure Fuze Rooms to use connected Microsoft™ Office 365, or Google Calendar™ accounts so that people can view and join meetings they've booked with Fuze Rooms in your organization.

To connect an account to a Fuze Room:

1. Navigate to Profile menu > Settings > Connected Accounts.
2. Enable Google and/or Office 365.
3. Select the room resource you want to display in the room.

Note: See our Administrator guide for more details about configuring Fuze Rooms.

Note: Fuze Rooms does not support connected accounts for on-premise directory resource tools.

Automatic Updates

To help your organization to stay up to date with the latest and greatest versions of Fuze Rooms, installations of Fuze Rooms now update automatically when a new version is available and the room is not in use.

System Requirements
