

Fuze Mobile 5.1

These release notes provide information about Fuze Mobile for iOS® and Android™.

Note: Always remember to visit our [Fuze Community site](#) for the latest release notes and other information.

What's New?

Voice Commands

If you're using Fuze Mobile for iOS, this release introduces the ability to use Siri voice commands to start calls and join meetings using your Fuze contacts, phone numbers, and scheduled meetings.

Try some of the following commands to get started:

Calls

"Hey Siri, ...

- Call [First name], [Last name] on their [phone type] phone
- Call [First name], [Last name] at [work/home]
- Call [phone number]
- Start a call to [someone/phonenum] using Fuze

... [with/using] Fuze."

Note: If a contact has multiple numbers or multiple contacts with the same name exist, Siri will list the available numbers and departments, and you can choose by speaking or tapping.

Meetings

"Hey Siri, ...

- Join meeting
- Join next meeting
- Next meeting

... [with/using] Fuze.”

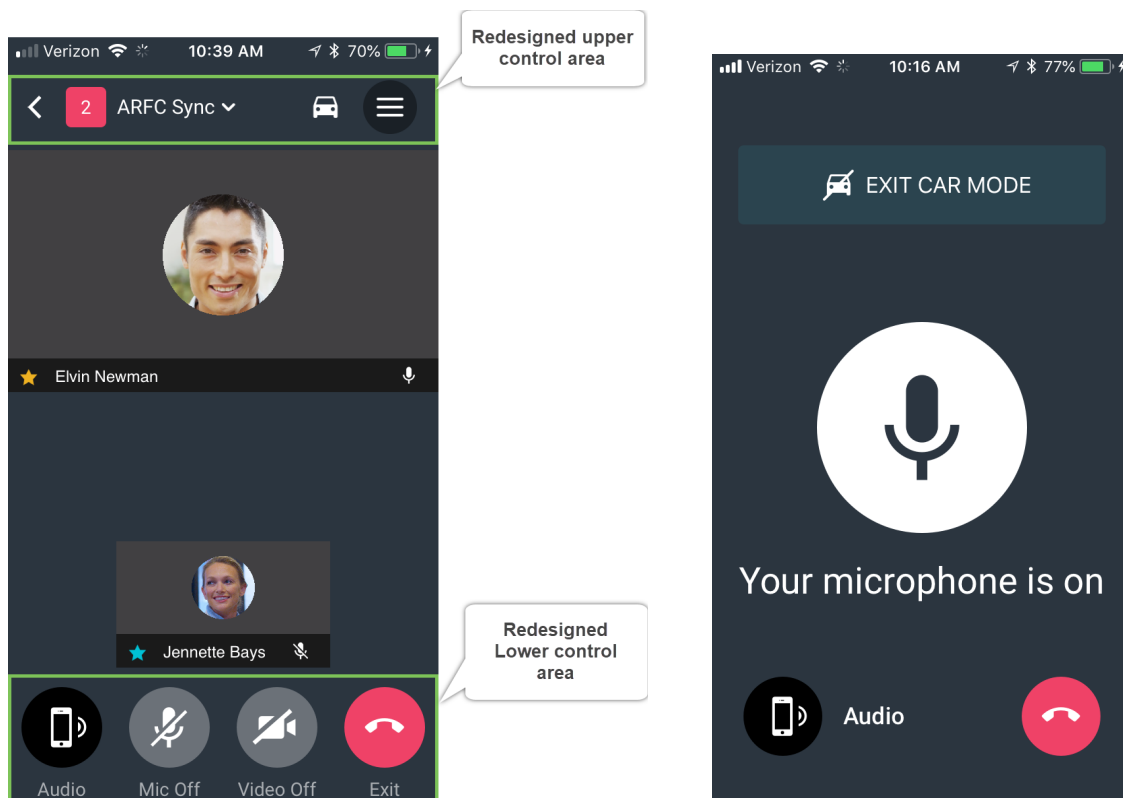

This will automatically launch your next Fuze meeting scheduled within a +/- 10 minute timeframe. If you have more than one meeting in a +/- 10 minute timeframe, Siri will list out the meetings and you can select the one you want to join by saying “the [first/second/third, etc.]”.

Meetings Experience Improvements

We’ve given Fuze Mobile a new coat of paint, and dozens of small design changes to enrich, streamline, and make your Meetings experience more meaningful. The following sections provide details about a few of the changes.

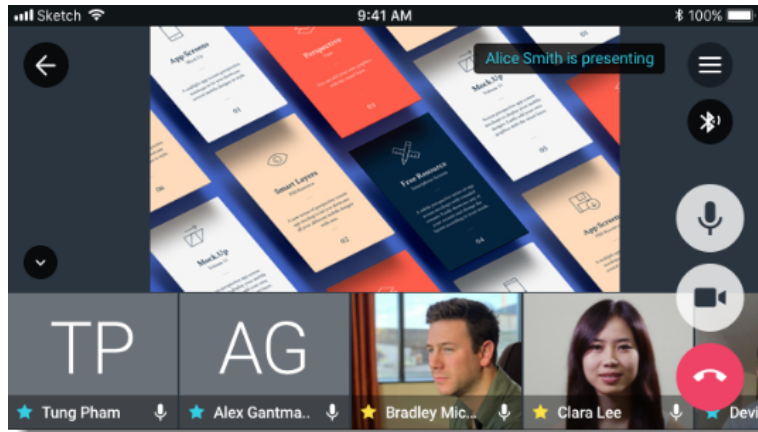

Redesigned Meeting controls and Car mode

We’ve redesigned the upper and lower meeting controls, as well as the Car Mode screen to improve access and usability in this release. We brought the more prominent action icons to the forefront, spaced them out and made them larger for an easier touch gesture.

Landscape View

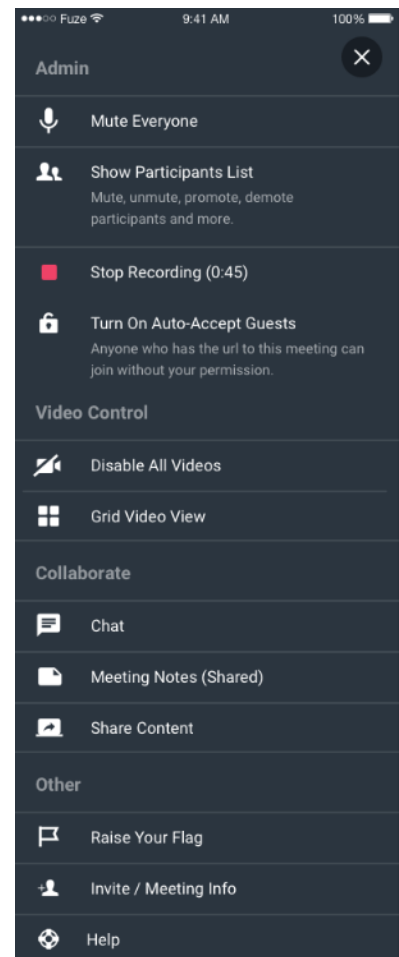

We've also extended our design changes to landscape view while in a Fuze Meeting to improve your experience if you need just a little more space while on a meeting.

Role-based Meetings Menu

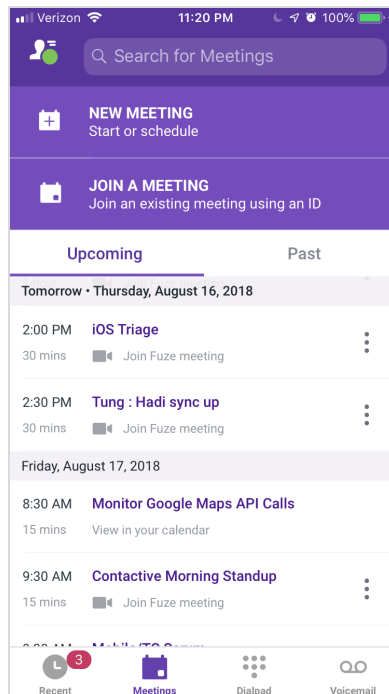

Fuze Mobile now provides you with role-specific options in the More menu in meetings, depending on your role.

Meeting hosts are able access meeting-level options such as recording, auto-accept, and more.

All Calendar Events on the Meeting List

Your meeting list now shows all connected calendar events, including events set up without a Fuze meeting url. You can continue to join Fuze meetings from the list. Tapping a calendar event without an associated Fuze meeting will simply launch your default calendar app to view the event.

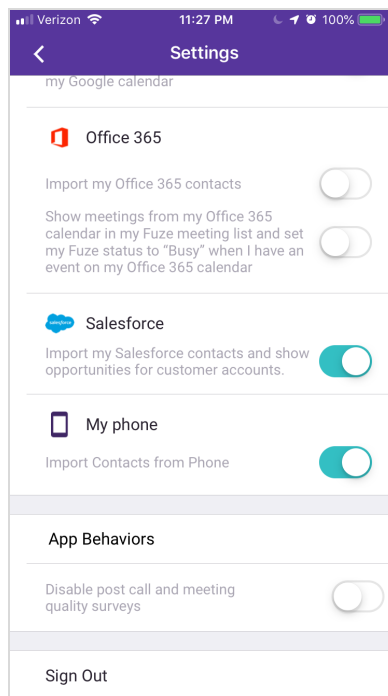

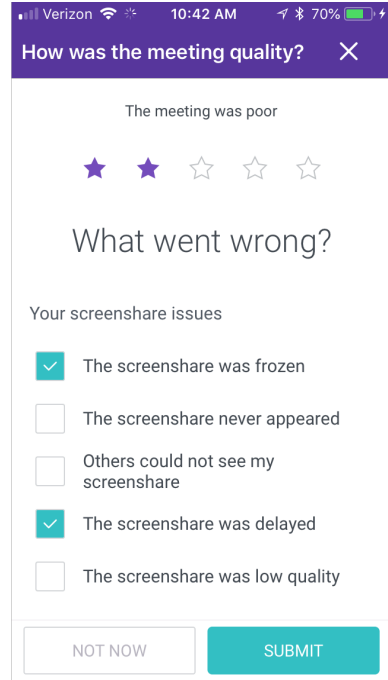

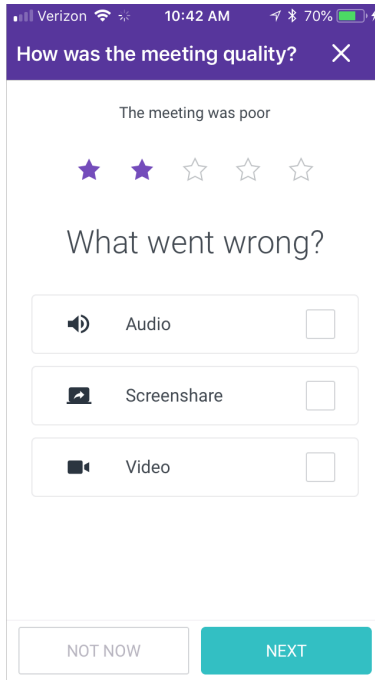

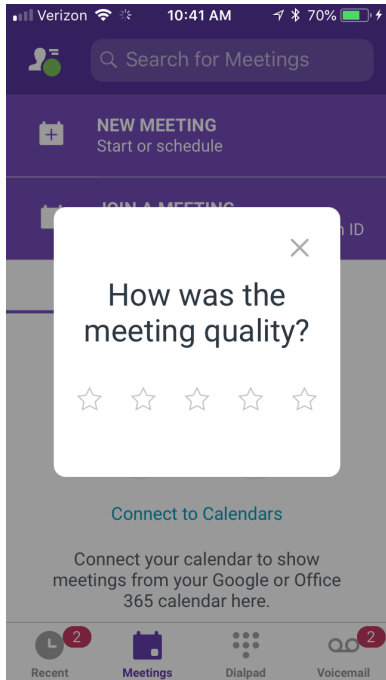

Call and Video Quality Surveys

We're always happy to receive feedback that we can use to make your Fuze experience even better. As a result, this release introduces call and video quality surveys that let people share feedback about each call or meeting, good or bad.

After calls and meetings, you can tap to rate the overall quality of your experience.

If the call or meeting quality is rated at anything less than three stars, additional screens appear in which you can provide more detail about your specific issues, and specifics about what can be improved.

You can switch off quality rating survey prompt in user settings.

Bug Fixes and Additional Improvements

Fuze Mobile 5.1 introduces the following bug fixes and improvements.

Improvements

- The app is fully vetted to operate on iOS 12 using public beta previews. iOS 12 is expected to be publicly available in Fall 2018.
- The app is fully vetted to operate on Android 9 'Pie'. Google started publicly rolling out Android 9 in Summer 2018.
- We improved performance for loading the meeting list, and searching for and starting meetings.

Bug Fixes

- We fixed an issue on the dialpad screen on iOS, with moving the cursor and editing a pasted phone number.

System Requirements

iOS

Download: [App Store®](#)

Size: 103 MB

Operating System: iOS 10, iOS 11

Compatible Devices: Apple® iPhone® 5, 5s, SE, 6, 6 Plus, 6s, 6s Plus, 7, 7 Plus, 8, 8 Plus, X
