Fuze Mobile 5.2
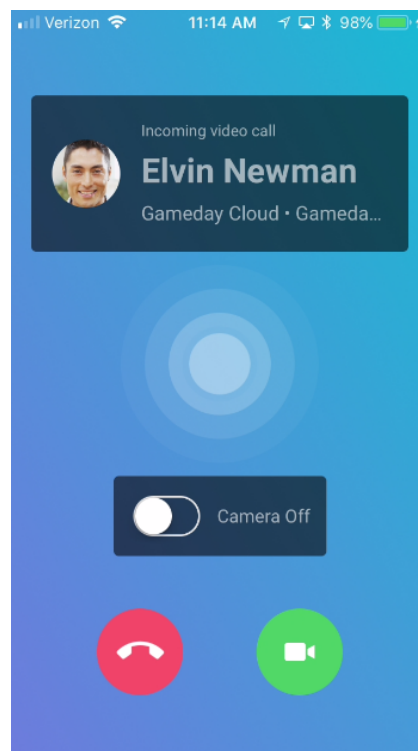

These release notes provide information about Fuze Mobile for iOS® and Android™.

Note: Always remember to visit our Fuze Community site for the latest release notes and other information.

What's New?

Enhancements to the Video Call Button

Now, when you tap ⬛ in a one-on-one or group conversation, Fuze initiates a ringing screen to notify the other person or group members that you are starting an ad-hoc meeting.
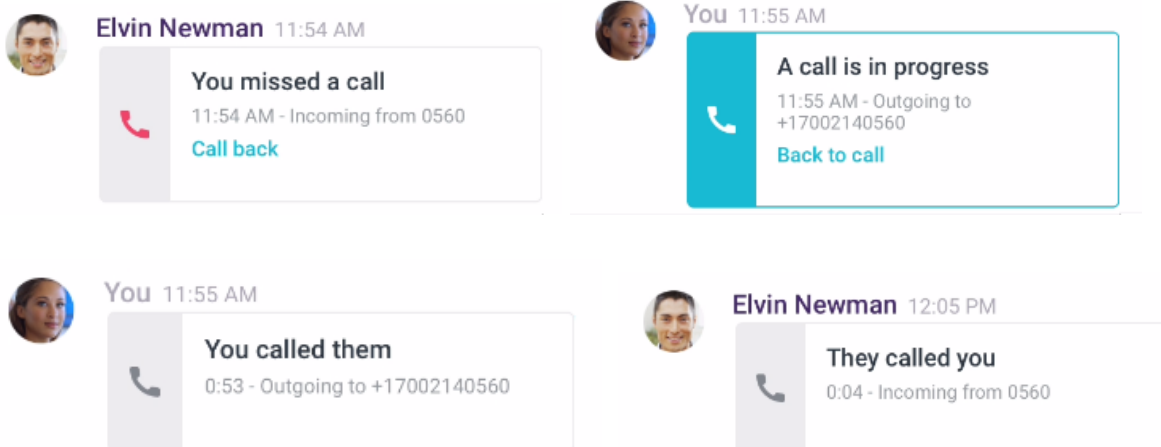

Video call notifications are even displayed on the lock screen of mobile devices, meaning that video call notifications behave just like an incoming phone call.

Recipients can choose to join the meeting with their video turned on or off when via the Camera On/Off setting that appears on the ring screen.

Voice Call Notification Enhancements

Notifications within chat conversations are enhanced in this release to include more detail, and the ability to call back or navigate back to active calls.
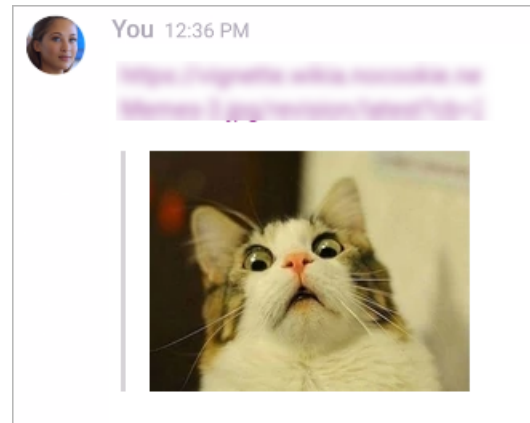

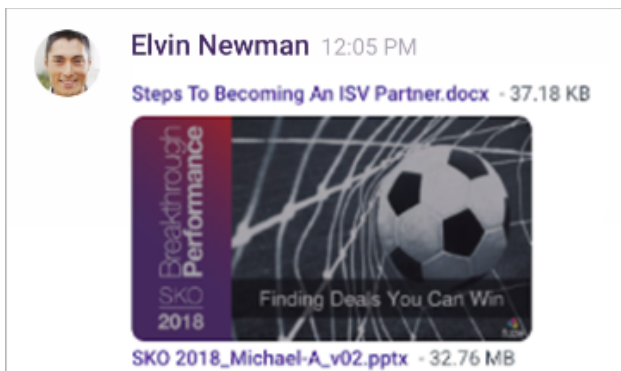

Chat Service Improvements

We've migrated Fuze Chat services to our own technology stack, meaning that Fuze Chat no longer relies on third-party services (specifically, Google's Firebase). This lets us to bring you a variety of performance and reliability improvements in this, and other releases coming soon!.

Two that you'll notice in this release are:

- Performance improvements for loading Chat history
- In-conversation thumbnail previews for images, files, url links, and gifs

Stay tuned for even more enhancements and new features in the near future!

Fixed Bugs and Additional Improvements

Fuze Mobile 5.2 also introduces the following notable bug fixes and additional improvements.

- Improved support for Single-Sign-On (SSO) using app redirect (as opposed url redirect).
- Meeting ID numbers are now displayed in the header of the meeting menu.
- The *Report a Problem* link is moved up one level up in user profile screen to improve visibility and accessibility.
- Siri Voice Commands are now localized.
- Improved Ringtones and vibration on Android devices.
- Fuze Mobile no longer crashes when a meeting guest tries to switch audio devices during a meeting.
- Disabling the *Import Contacts* setting from your mobile device now correctly removes contacts imported from your device's contact list.
